

Henry Hub Natural Gas Spot Prices 2005

Weak demand and a decrease in the price of crude oil were factors in lower natural gas spot prices this week at all market locations. For the week (Wednesday to Wednesday), the [spot](#) price at the Henry Hub fell 13 cents per million [British thermal units](#) (mmBtu), or about 2 percent, to \$6.50. The Henry Hub price was 22 cents, or 3.5 percent, above last year's level of \$6.28.

The amount of natural gas in storage in the East Region increased 7.9% for the week ending May 13 to 739 billion cubic feet which was 90 billion cubic feet above the 5-year average. Nebraska is a part of the [East Region](#) (see [map](#)) which is a major natural gas consumer, particularly in the [residential](#) and [commercial](#) sectors. The [industrial](#) sector, which includes agriculture, is also a major consumer in this state. Most of the gas is supplied from the [Producing Region](#) with a fair amount imported from Canada. The Henry Hub in southern Louisiana is a major market center with interconnections for many of the pipelines that transport U.S.-produced gas to the East Region. Furthermore, the Henry Hub is the preferred reference point for prices for most of the domestic gas destined for the East. Therefore, market conditions and developments in the East Region and price movements and trends at the Henry Hub are usually highly correlated.

Notes: An [archive](#) is available. Divide the price by ten (10) to obtain the price per hundred cubic feet ([ccf](#)) or the approximate price per [therm](#).
