

Henry Hub Natural Gas Spot Prices 2005

Temperatures were warmer compared to last week, which reduced space-heating demand. For the week (Wednesday to Wednesday), the [spot](#) price at the Henry Hub decreased \$1.25, or almost 9 percent, to \$13.55 per million [British thermal units](#) (mmBtu).

[Shut-in](#) natural gas production dropped to 2 billion cubic feet per day as of Monday, December 19, from its level on the previous Monday of 2.3 billion cubic feet per day.

The amount of natural gas in storage in the East Region decreased 5.7 percent to 1,645 billion cubic feet for the week ending December 16, which was 22 billion cubic feet above the 5-year average. Nebraska is a part of the [East Region](#) (see [map](#)) which is a major natural gas consumer, particularly in the [residential](#) and [commercial](#) sectors. The [industrial](#) sector, which includes agriculture, is also a major consumer in this state. Most of the gas is supplied from the [Producing Region](#) with a fair amount imported from Canada. The Henry Hub in southern Louisiana is a major market center with interconnections for many of the pipelines that transport U.S.-produced gas to the East Region. Furthermore, the Henry Hub is the preferred reference point for prices for most of the domestic gas destined for the East. Therefore, market conditions and developments in the East Region and price movements and trends at the Henry Hub are usually highly correlated.

Notes: An [archive](#) is available. Divide the price by ten (10) to obtain the price per hundred cubic feet ([ccf](#)) or the approximate price per [therm](#).

Natural Gas Spot Prices at the Henry Hub 2004 and 2005

Natural Gas Spot Prices at the Henry Hub 2005 [Price per Million [British Thermal Units](#) (mmBtu)]
