## **Henry Hub Natural Gas Spot Prices 2006**

On November 15, the Henry Hub natural gas spot price was \$7.45 per million British thermal units (mmBtu), which was eight cents, or 1.1 percent, higher than the price of \$7.37 last Wednesday. This Wednesday's price of \$7.45 was 33 percent lower than the price of \$11.04 per mmBtu on the third Wednesday in November, 2005.

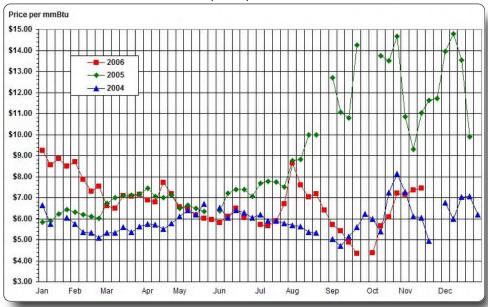

The amount of natural gas in storage in the East Region decreased 0.2 percent to 1,962 billion cubic feet for the week ending November 10, which was 64 billion cubic feet above the five-year average. Nebraska is a part of the East Region (see map) which is a major natural gas consumer, particularly in the residential and commercial sectors. The industrial sector, which includes agriculture, is also a major consumer in this state. Most of the gas is supplied from the Producing Region with a fair amount imported from Canada. The Henry Hub in southern Louisiana is a major market center with interconnections for many of the pipelines that transport U.S.-produced gas to the East Region. Furthermore, the Henry Hub is the preferred reference point for prices for most of the domestic gas destined for the East. Therefore, market conditions and developments in the East Region and price movements and trends at the Henry Hub are usually highly correlated.

Notes: An archive is available. Divide the price by ten (10) to obtain the price per hundred cubic feet (ccf) or the approximate price per therm.

\_\_\_\_\_ A general rule of thumb: Add three dollars to the Henry Hub spot price to estimate the residential natural gas price. Likewise, add 30 cents if you have already converted the price from British thermal units to ccf or therms.

## Natural Gas Spot Prices at the Henry Hub 2004, 2005, and 2006

## Natural Gas Spot Prices at the Henry Hub 2006 [Price per Million British Thermal Units (mmBtu)]
