

Henry Hub Natural Gas Spot Prices 2005

There was little respite this week from extreme winter conditions in major population centers in the Midwest and Northeast. [Alberta clippers](#) swept through with cold temperatures, which lifted demand and resulted in higher spot prices. For the week (Wednesday to Wednesday), [spot](#) prices at the Henry Hub increased 23 cents per million [British thermal units](#) (mmBtu), or about 3.7 percent, to \$6.44.

The amount of natural gas in storage in the East Region fell 10% for the week ending January 21 to 1,290 billion cubic feet which is 145 billion cubic feet above the 5-year average. Nebraska is a part of the [East Region](#) (see [map](#)) which is a major natural gas consumer, particularly in the [residential](#) and [commercial](#) sectors. The [industrial](#) sector, which includes agriculture, is also a major consumer in this state. Most of the gas is supplied from the [Producing Region](#) with a fair amount imported from Canada. The Henry Hub in southern Louisiana is a major market center with interconnections for many of the pipelines that transport U.S.-produced gas to the East Region. Furthermore, the Henry Hub is the preferred reference point for prices for most of the domestic gas destined for the East. Therefore, market conditions and developments in the East Region and price movements and trends at the Henry Hub are usually highly correlated.

Notes: An [archive](#) is available. Divide the price by ten (10) to obtain the price per hundred cubic feet ([ccf](#)) or the approximate price per [therm](#).
