

# Henry Hub Natural Gas Spot Prices 2005

Spot prices fell as the Presidents' Day holiday weekend approached; however, prices recovered with the return of industrial demand and expectations of a cold snap. For the week (Wednesday to Wednesday), [spot](#) prices at the Henry Hub fell 9 cents per million [British thermal units](#) (mmBtu), or about 1 percent, to \$6.02.

The amount of natural gas in storage in the East Region fell 6.4% for the week ending February 18 to 921 billion cubic feet which was 177 billion cubic feet above the 5-year average. Nebraska is a part of the [East Region](#) (see [map](#)) which is a major natural gas consumer, particularly in the [residential](#) and [commercial](#) sectors. The [industrial](#) sector, which includes agriculture, is also a major consumer in this state. Most of the gas is supplied from the [Producing Region](#) with a fair amount imported from Canada. The Henry Hub in southern Louisiana is a major market center with interconnections for many of the pipelines that transport U.S.-produced gas to the East Region. Furthermore, the Henry Hub is the preferred reference point for prices for most of the domestic gas destined for the East. Therefore, market conditions and developments in the East Region and price movements and trends at the Henry Hub are usually highly correlated.

Notes: An [archive](#) is available. Divide the price by ten (10) to obtain the price per hundred cubic feet ([ccf](#)) or the approximate price per [therm](#).
