

Henry Hub Natural Gas Spot Prices 2005

Price declines were seen at most market locations due to moderating temperatures which eased natural gas demand. For the week (Wednesday to Wednesday), the [spot](#) price at the Henry Hub dropped 17 cents per million [British thermal units](#) (mmBtu), or nearly 3 percent, to \$6.33. This spot price is the lowest for the Henry Hub since February 2005. The Henry Hub price was 39 cents, or 5.8 percent, below last year's level of \$6.72.

The amount of natural gas in storage in the East Region increased 8.1% for the week ending May 20 to 799 billion cubic feet which was 99 billion cubic feet above the 5-year average. Nebraska is a part of the [East Region](#) (see [map](#)) which is a major natural gas consumer, particularly in the [residential](#) and [commercial](#) sectors. The [industrial](#) sector, which includes agriculture, is also a major consumer in this state. Most of the gas is supplied from the [Producing Region](#) with a fair amount imported from Canada. The Henry Hub in southern Louisiana is a major market center with interconnections for many of the pipelines that transport U.S.-produced gas to the East Region. Furthermore, the Henry Hub is the preferred reference point for prices for most of the domestic gas destined for the East. Therefore, market conditions and developments in the East Region and price movements and trends at the Henry Hub are usually highly correlated.

Notes: An [archive](#) is available. Divide the price by ten (10) to obtain the price per hundred cubic feet ([ccf](#)) or the approximate price per [therm](#).
