

# Henry Hub Natural Gas Spot Prices 2005

Factors contributing to price increases this week were demand stemming from above-average temperatures, high crude oil prices, and reduced coal deliveries which added to natural gas-fired power generation demand. For the week (Wednesday to Wednesday), the [spot](#) price at the Henry Hub rose 6 cents to \$8.81 per million [British thermal units](#) (mmBtu). The Henry Hub price was \$3.04, or 53 percent, above last year's level of \$5.77.

The amount of natural gas in storage in the East Region increased 2.9% for the week ending August 5 to 1,365 billion cubic feet which was 44 billion cubic feet above the 5-year average. Nebraska is a part of the [East Region](#) (see [map](#)) which is a major natural gas consumer, particularly in the [residential](#) and [commercial](#) sectors. The [industrial](#) sector, which includes agriculture, is also a major consumer in this state. Most of the gas is supplied from the [Producing Region](#) with a fair amount imported from Canada. The Henry Hub in southern Louisiana is a major market center with interconnections for many of the pipelines that transport U.S.-produced gas to the East Region. Furthermore, the Henry Hub is the preferred reference point for prices for most of the domestic gas destined for the East. Therefore, market conditions and developments in the East Region and price movements and trends at the Henry Hub are usually highly correlated.

Notes: An [archive](#) is available. Divide the price by ten (10) to obtain the price per hundred cubic feet ([ccf](#)) or the approximate price per [therm](#).
