

Henry Hub Natural Gas Spot Prices 2005

Heating demand increased this week as winter weather and cold weather forecasts hit most of the nation. For the week (Wednesday to Wednesday), the [spot](#) price at the Henry Hub rose 59 cents, or about 5 percent, to \$11.73 per million [British thermal units](#) (mmBtu). This Wednesday's price of \$11.73 was \$4.94, or 73 percent, above last year's level of \$6.79.

[Shut-in](#) natural gas production dropped to 3 billion cubic feet as of Wednesday, November 30, from its level on the previous Wednesday of 3.2 billion cubic feet.

The amount of natural gas in storage in the East Region decreased 2.1% for the week ending November 25 to 1,896 billion cubic feet which was 82 billion cubic feet above the 5-year average. Nebraska is a part of the [East Region](#) (see [map](#)) which is a major natural gas consumer, particularly in the [residential](#) and [commercial](#) sectors. The [industrial](#) sector, which includes agriculture, is also a major consumer in this state. Most of the gas is supplied from the [Producing Region](#) with a fair amount imported from Canada. The Henry Hub in southern Louisiana is a major market center with interconnections for many of the pipelines that transport U.S.-produced gas to the East Region. Furthermore, the Henry Hub is the preferred reference point for prices for most of the domestic gas destined for the East. Therefore, market conditions and developments in the East Region and price movements and trends at the Henry Hub are usually highly correlated.

Notes: An [archive](#) is available. Divide the price by ten (10) to obtain the price per hundred cubic feet ([ccf](#)) or the approximate price per [therm](#).

Natural Gas Spot Prices at the Henry Hub 2004 and 2005
