

Henry Hub Natural Gas Spot Prices 2005

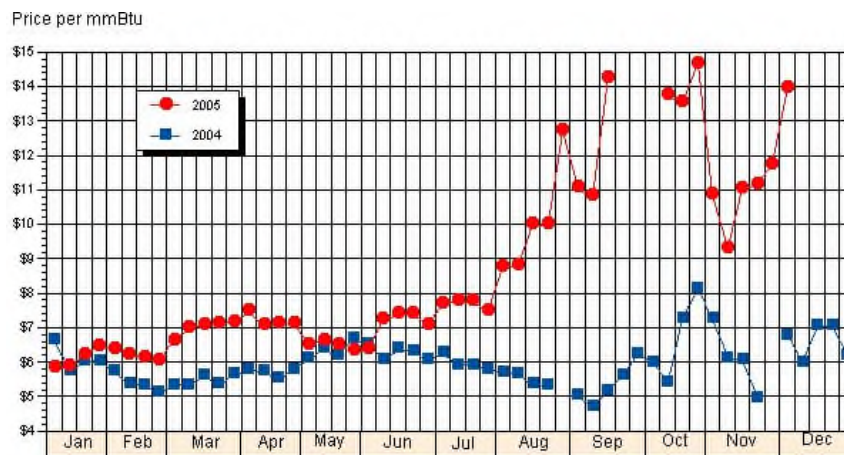

Spot prices increased as bitter cold temperatures moved in. For the week (Wednesday to Wednesday), the [spot](#) price at the Henry Hub jumped \$2.22, or about 19 percent, to \$13.95 per million [British thermal units](#) (mmBtu). This Wednesday's price of \$13.95 was \$7.90, or 131 percent, above last year's level of \$6.05.

[Shut-in](#) natural gas production dropped to 2.5 billion cubic feet per day as of Wednesday, December 7, from its level on the previous Wednesday of 3 billion cubic feet per day.

The amount of natural gas in storage in the East Region decreased 1.8 percent to 1,862 billion cubic feet for the week ending December 2, which was 94 billion cubic feet above the 5-year average. Nebraska is a part of the [East Region](#) (see [map](#)) which is a major natural gas consumer, particularly in the [residential](#) and [commercial](#) sectors. The [industrial](#) sector, which includes agriculture, is also a major consumer in this state. Most of the gas is supplied from the [Producing Region](#) with a fair amount imported from Canada. The Henry Hub in southern Louisiana is a major market center with interconnections for many of the pipelines that transport U.S.-produced gas to the East Region. Furthermore, the Henry Hub is the preferred reference point for prices for most of the domestic gas destined for the East. Therefore, market conditions and developments in the East Region and price movements and trends at the Henry Hub are usually highly correlated.

Notes: An [archive](#) is available. Divide the price by ten (10) to obtain the price per hundred cubic feet ([ccf](#)) or the approximate price per [therm](#).
