

Henry Hub Natural Gas Spot Prices 2006

Mixed temperatures brought late-season heating demand in parts of the Midwest and applied upward pressure on prices. On June 14, the Henry Hub natural gas [spot price](#) had risen 27 cents per million [British thermal units](#) (mmBtu), or five percent, since last Wednesday to \$6.09. This Wednesday's price of \$6.09 was \$1.13 lower than the price of \$7.22 per mmBtu on the second Wednesday in June, 2005.

The amount of natural gas in [storage](#) in the East Region increased 4.5 percent to 1,268 billion cubic feet for the week ending June 9, which was 372 billion cubic feet above the five-year average. Nebraska is a part of the [East Region](#) (see [map](#)) which is a major natural gas consumer, particularly in the [residential](#) and [commercial](#) sectors. The [industrial](#) sector, which includes agriculture, is also a major consumer in this state. Most of the gas is supplied from the [Producing Region](#) with a fair amount imported from Canada. The Henry Hub in southern Louisiana is a major market center with interconnections for many of the pipelines that transport U.S.-produced gas to the East Region. Furthermore, the Henry Hub is the preferred reference point for prices for most of the domestic gas destined for the East. Therefore, market conditions and developments in the East Region and price movements and trends at the Henry Hub are usually highly correlated.

Notes: An [archive](#) is available. Divide the price by ten (10) to obtain the price per hundred cubic feet ([ccf](#)) or the approximate price per [therm](#).
