

Henry Hub Natural Gas Spot Prices 2006

Prices were pushed upward by increased cooling loads due to hot temperatures. On June 21, the Henry Hub natural gas [spot price](#) had risen 41 cents per million [British thermal units](#) (mmBtu), or seven percent, since last Wednesday to \$6.50. This Wednesday's price of \$6.50 was 89 cents lower than the price of \$7.39 per mmBtu on the third Wednesday in June, 2005.

The amount of natural gas in [storage](#) in the East Region increased 3.9 percent to 1,317 billion cubic feet for the week ending June 16, which was 360 billion cubic feet above the five-year average. Nebraska is a part of the [East Region](#) (see [map](#)) which is a major natural gas consumer, particularly in the [residential](#) and [commercial](#) sectors. The [industrial](#) sector, which includes agriculture, is also a major consumer in this state. Most of the gas is supplied from the [Producing Region](#) with a fair amount imported from Canada. The Henry Hub in southern Louisiana is a major market center with interconnections for many of the pipelines that transport U.S.-produced gas to the East Region. Furthermore, the Henry Hub is the preferred reference point for prices for most of the domestic gas destined for the East. Therefore, market conditions and developments in the East Region and price movements and trends at the Henry Hub are usually highly correlated.

Notes: An [archive](#) is available. Divide the price by ten (10) to obtain the price per hundred cubic feet ([ccf](#)) or the approximate price per [therm](#).
