[Graph](#) | [Prices](#) | [Annual Report](#) | [Wholesale Prices](#)

## Analysis

On May 2, 2005, the average residential [propane](#) price dropped one penny from last month to \$1.21 a gallon (see the [table](#) at the end of this report). The [graph](#) below the text shows the spread in prices from month to month and from this year compared to the previous years. The price was 24 cents (25 percent) higher than the price at this time last year. With 11.3 million barrels in storage on April 29, the Midwest region inventory level was at the upper boundary of the normal range for this time of year.

Notes: The annual report for the 2004-2005 winter season will be available in June. The [archive](#) houses annual reports from previous years.

## Heating Season

The Nebraska Energy Office has participated in the State Heating Oil and Propane Program for four years. During the heating season (October to March), the staff contact 23 companies each week who supply propane to Nebraska, collect Monday's retail price, and submit the data to the [Energy Information Administration](#). The Energy Information Administration calculates the average price shown in the [table](#) below.

In the Midwest region, Nebraska's average residential propane price was the lowest price each week during the last three heating seasons. The Energy Information Administration theorized that this was due to minimal transportation costs since Nebraska's [wholesale](#) prices were not the lowest in the region each week. Another reason would be the number of participating states. Since state participation in the program is voluntary, propane prices were not surveyed in each state in the Midwest region. Kansas and Oklahoma might also have had low prices--possibly lower than Nebraska's because the two states are closer to production, refinery, and storage areas.

## Off Season

During the off season (April through September), the Nebraska Energy Office staff continue to contact the same suppliers who were contacted during the heating season. Staff contact suppliers once a month instead of once a week since the price of propane is usually not as volatile during the off season. The Nebraska Energy Office staff calculate the average price, shown in the [table](#) below, from the suppliers' retail prices on the first Monday of the month.

## State Heating Oil and Propane Program

The Energy Information Administration, the independent statistical and analytical agency within the U.S. Department of Energy, conducts the State Heating Oil and Propane Program from October to March--the heating season--each year. The Energy Information Administration collects prices for the program each week from participating states and calculates a state average price, a regional average price, and a national average price which can be seen in the report [Residential Propane Prices by Region and State](#).

## Midwest Region

	Heating Season						Off Season
