Analysis

On November 24, 2008, the average residential [heating oil](#) price had fallen 13 cents from last week to \$2.27 per gallon (see the [table](#) at the end of this report). The [graph](#) below shows the spread in prices from month to month and from this year compared to previous years. This week's average price was 81 cents (or 26 percent) lower than the price at this time last year. (Note that last week's average price has been revised.)

Other [states](#) in the Midwest Region had comparable prices ranging from \$2.26 to \$2.58 with the region averaging \$2.39 per gallon. States adjacent to Nebraska, such as Iowa, Minnesota, and Wisconsin, had prices of \$2.30, \$2.58, and \$2.43, respectively.

Nebraska's average wholesale price fell nearly 17 cents this week, while the [rack-to-retail](#) margin increased to 26 cents.

For the week ending November 21, the Midwest heating oil inventory level was at the bottom boundary of the normal range for this time of year at 2.4 million barrels.

Notes: The [annual report](#) for the 2007-2008 winter season is available. An [archive](#) houses annual reports from previous years.

A general rule of thumb: A dollar increase in the [West Texas Intermediate](#) (WTI) crude oil price per barrel will result in a 2.5-cent increase in the price of heating oil per gallon. Likewise, a dollar decrease in the WTI crude oil price per barrel will result in a 2.5-cent decrease in the price of heating oil per gallon.

Heating Season

The Nebraska Energy Office has participated in the State Heating Oil and Propane Program for eight winter seasons. During the heating season (October to March), the staff contact companies each week who supply heating oil to Nebraska, collect Monday's retail price, and submit the data to the [Energy Information Administration](#). The Energy Information Administration calculates the average price shown in the [table](#) below.

At times, Nebraska's average residential heating oil price has been the lowest price in the Midwest Region. The Energy Information Administration theorized that this was due to minimal transportation costs. Another reason would be the number of participating states. Since state participation in the program is voluntary, heating oil prices were not surveyed in each state in the Midwest Region. Kansas and Oklahoma might also have had low prices--possibly lower than Nebraska's because the two states are closer to heating oil sources.

Off Season

During the off season (April through September), the Nebraska Energy Office staff continue to contact the same suppliers who were contacted during the heating
