[Midseason Report](#)

Analysis

On January 31, 2011, the average residential [heating oil](#) price had increased 1 cent from the last report to \$3.00 per gallon (see the [table](#) at the end of this report). Note that last week's average price was revised. The [graph](#) below shows the spread in prices from month to month and from this year compared to previous years.

The other [states](#) surveyed in the Midwest Region had higher prices ranging from \$3.03 to \$3.20 per gallon resulting in a regional average of \$3.14. States near in proximity to Nebraska, such as Iowa, Minnesota, and Wisconsin had prices of \$3.03, \$3.13, and \$3.13, respectively.

From the last report, Nebraska's average wholesale price had increased nearly 6 cents to \$2.81 per gallon while the average retail price had increased 1 cent to \$3.00 per gallon. As a result, the rack-to-retail margin decreased to 19 cents per gallon. Of the surveyed states in the region this week, Nebraska had the lowest average retail price but not the lowest average wholesale price.

For the week ending January 28, the Midwest heating oil inventory was at 800,000 barrels. The total regional distillate inventory level was in the upper half of the normal range for this time of year.

Notes: The [annual report](#) for the 2009-2010 winter season is available. An [archive](#) houses annual reports from previous years.

A general rule of thumb: A dollar increase in the [West Texas Intermediate](#) (WTI) crude oil price per barrel will result in a 2.5-cent increase in the price of heating oil per gallon. Likewise, a dollar decrease in the WTI crude oil price per barrel will result in a 2.5-cent decrease in the price of heating oil per gallon.

Heating Season

The Nebraska Energy Office has participated in the State Heating Oil and Propane Program for ten winter seasons. During the heating season (October to March), the staff contact companies each week who supply heating oil to Nebraska, collect Monday's retail price, and submit the data to the [Energy Information Administration](#). The Energy Information Administration calculates the average price shown in the [table](#) below.

At times, Nebraska's average residential heating oil price has been the lowest price in the Midwest Region. The Energy Information Administration theorized that this was due to minimal transportation costs. Another reason would be the number of participating states. Since state participation in the program is voluntary, heating oil prices were not surveyed in each state in the Midwest Region. Kansas and Oklahoma might also have had low prices--possibly lower than Nebraska's because the two states are closer to heating oil sources.
